Overview

We created a website where the user can find recipes from all over the world and check out some food related news as an extra.

From the drop-down menu, select a country. This will list four recipes from that country with detailed instructions.

When a country is selected, a button is created for easier access and the data is saved to local storage. Multiple buttons can be generated.

There are also links to some quick recipes which remain consistently on the page.

Explore the taste of the world with our World Foods website.

- Motivation for development?

- We wanted

- to create a website using two different but somehow related APIs.
 - to create a website which makes recipes from multiple countries easy to access.
 - the user to find recipes easily without feeling overwhelmed by too much choice.
 - to fill a gap in the market for these points, as we didn't find many similar websites.

- User story:

- As a user, I want to find recipes local to a specific country.

I will click on a country name and relevant recipes will appear.

Countries I click will be saved to my search history, so I can access them again.

If I scroll further down the webpage, articles related to food and recipes will be displayed on cards, which I can click on to read the full article.

Process

- **Technologies used:** Bootstrap, Javascript, HTML, CSS, jQuery, Google Fonts
- **API:** MealDB, gnews.io
- **Breakdown of tasks and roles:**
 - Gathering information about APIs
 - Planning the concept and UX/UI
 - Wireframe + design
 - Functionality || JavaScript, HTML and CSS - with continuous testing
 - Mobile responsiveness
- **Challenges:**
 - Rethink the concept due to limits of APIs
 - Creating a complex website that suitable for our level of knowledge
 - GitHub conflicts
- **Successes:**
 - APIs and functionality of webpage elements
 - Everything works!

Directions for Future Development

Add more content to the webpage.

Add search function and find recipes by name.

Users can register for an account on the website as their special open world recipe book, where they can store their favourite recipes and also add new recipes.

Add extra styling features to the page to make it more fun to use.

Give users the option to sign up for a newsletter.

Add an option for paid features as an extra.
